AB   The benefits of lipid-lowering therapy in significantly reducing
     cardiovascular events has been established in many at-risk populations.
     However, patients with the metabolic syndrome (MS) pose a
     challenge for clinical management. A high degree of residual risk exists
     in patients with the MS or diabetes mellitus, and this is of
     growing importance because of the increasing prevalence of obesity and its
     associated comorbidities in the world. As the MS has emerged as
     a major risk factor for both cardiovascular disease and diabetes,
     targeting treatment to achieve aggressive goals becomes paramount. This
     article reviews emerging therapeutic strategies for the management of
     dyslipidemia in patients with the MS. .COPYRGT. 2004 by Excerpta
     Medica, Inc.
